

Fix a Leak Week

The average household's leaks result in more than

10,000

gallons of water wasted each year.

That roughly the same amount of water needed to wash

270

loads of laundry.

10% of homes have leaks that waste **90 gallons** or more per day.

Common types of leaks found in the home include worn toilet flappers, dripping faucets, and other leaking valves.

All are easily fixed.

Fixing easily corrected household water leaks can **SAVE** homeowners up to **10 percent** on their water bills.

Keep your home leak-free by repairing dripping faucets, toilet flappers, and showerheads.

Most common leaks can be eliminated after retrofitting a household with new WaterSense labeled fixtures and other high-efficiency appliances.
